 **KROBAT**  
— [www.akrobat.si](http://www.akrobat.si) —

This catalogue was made in a way to help you choose the right trampoline and accessories that go with it. At every product you will find a name and it's characteristics.

All products are developed and produced by Akrobat and are made of materials that give maximum security and comfort to the jumpers. They are tested by European standards and have certificates for safety.

Akrobat offers you one year warranty for all of it's products.

Trampoline maintenance:

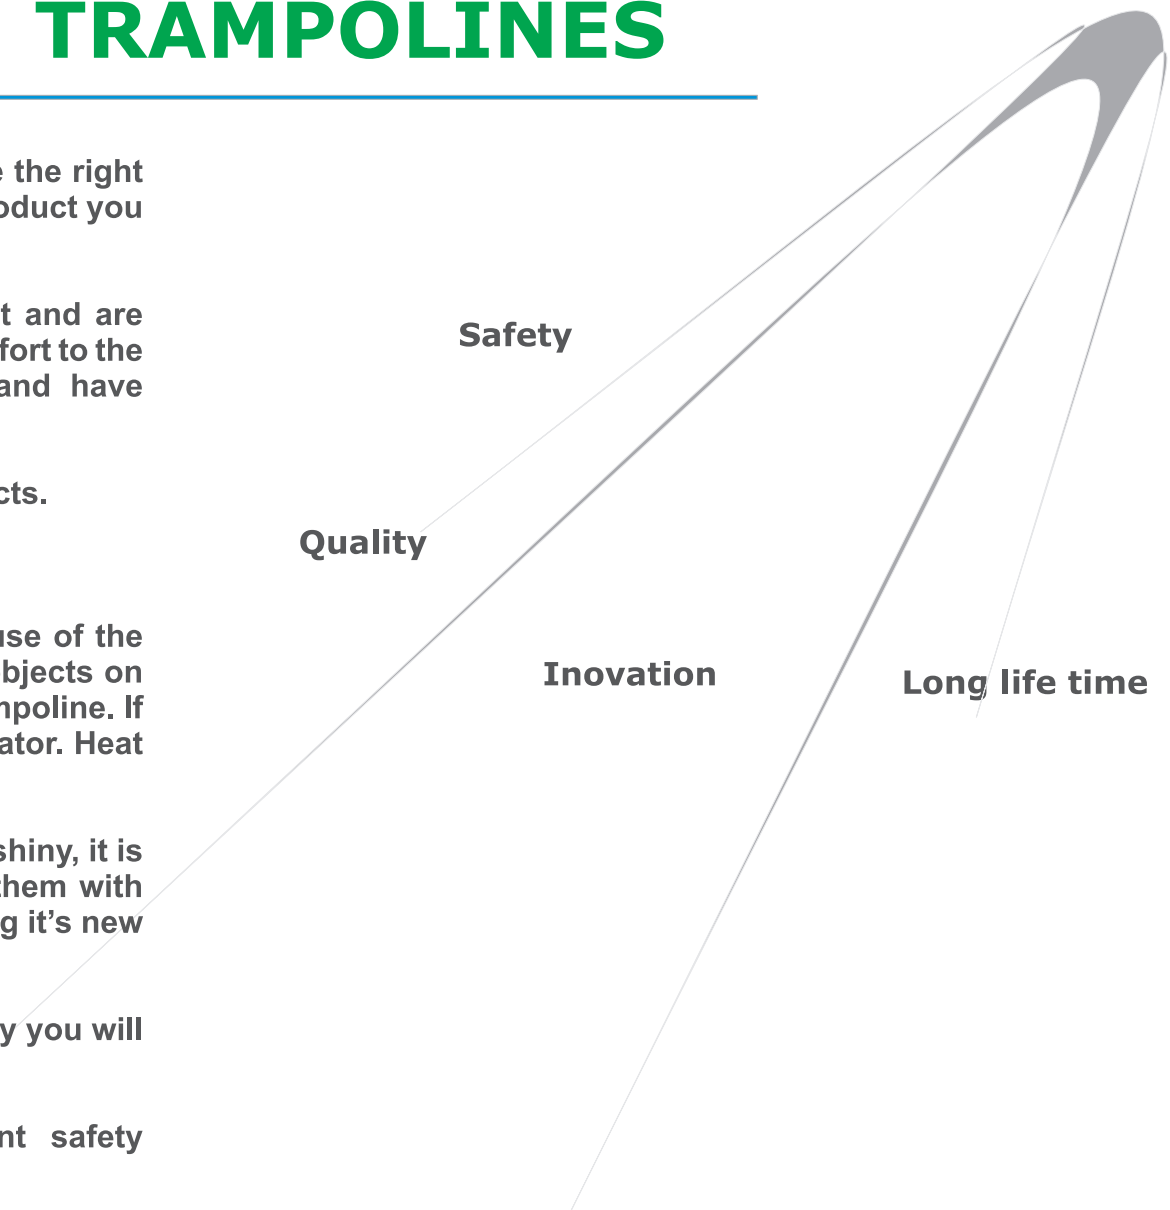

Most of damage is done with a wrong use and/or abuse of the trampoline and accessories. Do not bring any sharp objects on the trampoline and do not use heat or fire near the trampoline. If storing the trampoline, do not keep it close to the radiator. Heat causes premature ageing of a foam and pvc cover.

To keep trampoline and safety net surfaces clean and shiny, it is disable to clean them with PVC Cleaner and protect them with PVC Protector every 6 month. This way you will prolong it's new look and make it long lasting.

Trampoline has to be on a level grass surface. This way you will keep it stable and safe.

On every trampoline you will find most important safety instructions labeled on the frame pad.

## ROUND TRAMPOLINES

Akrobat PRO trampolines are the best quality trampolines. Steel frame is treated with hot zinc from inside and outside and gives a good protection from rusting. Spring length and a special shape give a trampoline a good rebound and can beary big weight. Round trampoline frame is extra reinforced. Upper frame is made of 45/2mm tube, frame sockets are made of 45/2mm tube and legs are made of 42/1,5mm tube. Max weight: 140kg

European best production springs with a quality certificate.

## AKROBAT PRO 480

## RECTANGULAT TRAMPOLINES

Rectangular Akrobat PRO trampolines are made of the best quality steel 50/2mm. Hawaii trampoline has an extra extension leg in the middle of each leg and double frame on each side what makes the trampoline even stronger. Bahama max weight: 130kg Hawaii max weight: 140kg

	3,32 x 2,54 x 0,88m	261x40x11cm	2	72	21,5 cm x 56

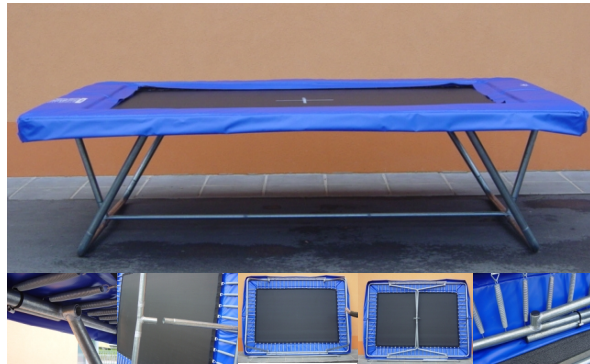

## AKROLIS 110 AND 150

Akrolis 110 and Akrolis 150 are indoor or outdoor trampolines. Specialty designed frame and legs give them good stability and ability to be used outside also. Frame pad is made of 2cm foam and covered with pvc (600g/m<sup>2</sup>) with a big tearing strengt and good UV stability. Max weight: 100kg.

## RECTANGULAT TRAMPOLINES - FOLDABLE LEGS

Rectangular trampoline with folding legs is suitable for those clients that need to store the trampoline when not in use. It is an easy and simple system for storing or preparing it for use.

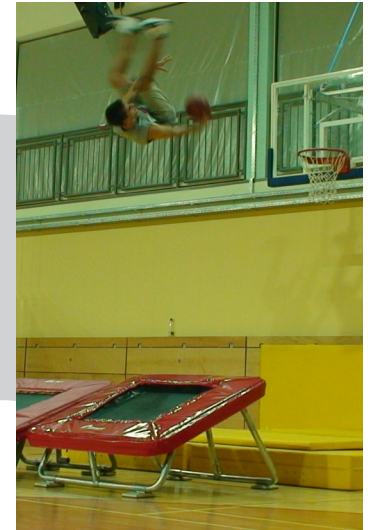

## INGROUND TRAMPOLINES

Inground trampolines are recommended in areas with a strong wind. Frame of the trampoline has a double ring frame (on the top and on the bottom of the trampoline). On the frame are attached steel plates (treated with zinc) to prevent soil from falling under the trampoline. To allow air to escape while jumping, there are air holes on the top of the frame.

## ACROBATIC TRAMPOLINE

Acrobatic trampoline offers best performance. With a very good rebound and excellent stability makes it suitable for acrobates and acrobat show groups. Heavy duty frame can support big forces. One of the most important advantages is Akrobat innovative design, which makes this trampoline portable. You can easily dismount it, put it in a trampoline bag and take it with you on the show.

					21,5 cm x 40

MINI GYM is meant for gymnastic use in schools. Strong and stable frame is adjustable on different heights on both legs. Bottom of the leg is protected with rubber to prevent slipping. Frame is covered with a frame pad. This way children can not hit springs or the frame.

## MINI GYM

School version trampoline.

					21,5 cm x 40

## ROUND FRAME PADS PRO

Pro version frame pads are made of the best quality foam (3cm) and pvc. Both are flame retardent, foam does not absorb water, pvc has a very high UV stability and a laquered film to make it nicer and long lasting. Frame pad is attached with elastic toggles. Eyelets are 18mm dimension, heavy duty. Frame pad can be outside throughout the year.

## ROUND FRAME PADS BASIC

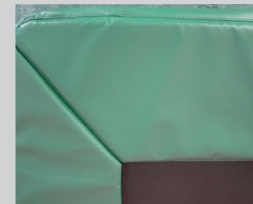

Basic version frame pads are made of a 2cm white foam and covered with mat pvc. Frame pads have a very high UV stability and are protected against all weather conditions. Frame pad is attached with elastic toggles. Eyelets are 10mm dimension.

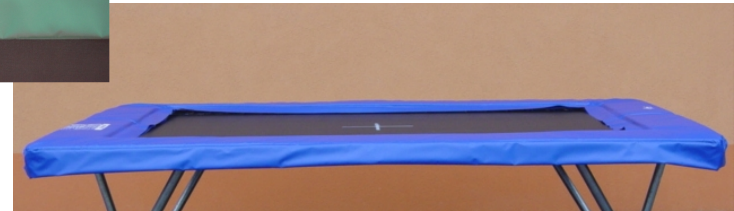

## RECTANGULAR FRAME PADS PRO

Rectangular frame pads are made in one piece and are easy to install. They are attached with elastic toggles.

## RECTANGULAR FRAME PADS BASIC

Basic rectangular frame pads are made in one piece and are easy to install. They are attached with elastic toggles.

# Frame pads

Most common colours:

All basic colours are available.

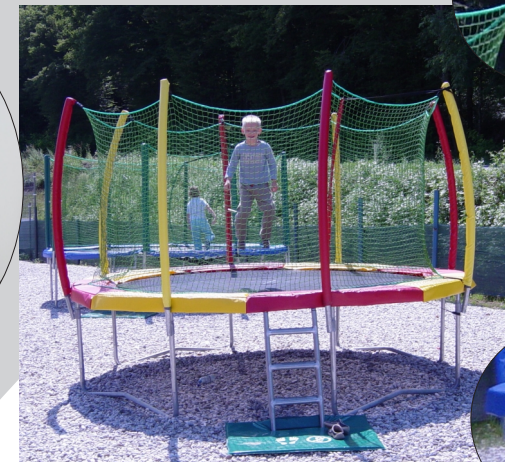

## SAFETY NET CLASSIC

Classic version safety net represents an easy installation. Akrobat patented assembling part makes this safety net strong, very easy to install, it is very safe and has a long life time. Green netting is unstretchable under the sun and rain and is UV stable. Classic safety net contains no elastics or ropes and therefore no braking points. Easy and fast installation, long life time and a nice look are the reasons why this type is so popular with buyers. This type is available in two heights: 1,65m and 1,8m.

Safety nets Akrobat are developed in a way to allow jumper on a trampoline maximum security. Strong assembling parts allow perfect stability. Netting is very strong and UV stable. Poles are protected with foam and covered with pvc sleeves. Entrance is made on folding door. It does not require any tools or knowledge to install Akrobat safety nets.

## SAFETY NET SUN

Sun version is a differently designed safety net. You can recognize it by its curved poles which give the trampoline a softer look. Net is attached with plastic clips and it is easy to install. In this case it is no separated assembling part. Assembling part is already attached to the pole and you only place it on the leg of the trampoline.

SAFETY NET	packing	Nr. of poles	weight in kg	Hight
SUN 300	194x40x21cm	8	30	1,65m/curved
SUN 360	194x40x21cm	8	33	1,65m/curved
SUN 430	194x40x21cm	8	34	1,65m/curved

## SAFETY NET GALLUS

GALLUS safety net can be installed on a round Akrobat Pro trampoline. Upper frame of the safety net gives bigger stability, closed structure and a nicer look. Jumpers can enter trampoline at the door and it can be locked, when not in use. All parts of the safety net are covered with foam and pvc. It is easy to install and does not require any tools. With the safety net you receive also 1/8 of the trampoline frame, which you have to replace. That frame has assembling part for the door. With Gallus is normally used pvc skirt and wooden (impregnated) steps to offer bigger security.

SAFETY NET	packing	Nr. of poles	weight in kg	Hight
GALUSS 430	209x47x22cm	8	55	1,8m
GALUSS 480	209x52x22cm	10	60	1,8m

## RECTANGULAR SAFETY NET

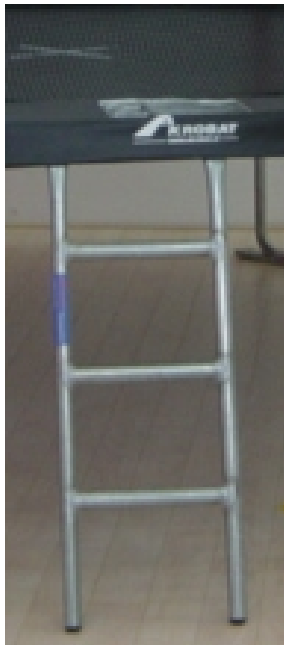

2 options: zipper door or folding door

Akrobat rectangular safety net was the first rectangular safety net ever built. Separated structure makes enclosure very stable and netting outside the trampoline. This way you have a maximum security and a lot of space on the trampoline. Poles are covered with foam and pvc sleeves. All materials are UV stable and with big tearing resistance. Entrance can be with zipper door or folding door. Both offer an easy entering. As all Akrobat products, it does not require any tools for installation. Bottom part of the safety net can be covered with pvc skirt.

SAFETY NET	packing	Nr. of poles	weight in kg	Hight
BAHAMA	215x34x24cm	6	60	1,65m
HAWAII	250x34x24cm	6	65	1,65m

## STEEL LADDER

Trampoline ladders allow an easy access to the trampoline. They adjust to the trampoline frame with a specially designed hooks. This way they do not damage the frame pad.

Steel ladders are suitable for children +5 years.

Ecoles steps are made of wood/plastic composite (60% wood and 30% plastic) and it's suitable for outside use. It feels and looks like wood, but it has 10 years warranty on outside use without colouring or any other treatment. They have inox hooks at the top. Because of it's wider steps they are advisable for children under 5 years of age.

Both types can be used on any size of the trampoline.

## ECOLES STEPS

## LADDER MAT

Ladder mat prevents dirt from getting on the trampoline. After the rain there is always a mud around the trampoline. Children have a clean surface for taking their shoes off. This way you also keep grass and stones off the trampoline. It is easy to clean.

## TRAMPOLINE SEAT

When small child is on a trampoline and needs an adult supervision, you can use trampoline seat. This way you do not intervene with it's jumping. It is also wonderful for resting or reading a book. Trampoline seat can be used by children and adults.

## PVC SKIRT

To close bottom part of the trampoline to prevent children going under it or to make it look nicer, you can use pvc skirt. Combination of the same material and colour gives a complete look to the trampoline. Pvc skirt is attached to the netting and on bottom legs. You can also use it for logo or advertisement. Pvc skirt can be placed on all trampolines.

## PVC CLEANING SOLUTION

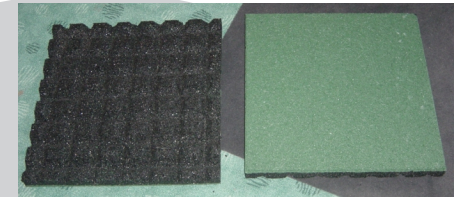

We offer you trampoline cleaning solution. When trampoline is used outside we get a lot of dirt on it. It is particularly effective on leaf stains, bird droppings, tree sap, berry juice, wine, barbecue smoke, oil and grease. It safely soaks in and lifts up soils and stains so that they can be easily rinsed or wiped away.

## PVC UV PROTECTION, SPF 40

To keep PVC well protected from UV and give it its shine back after many years of use you should use very powerful trampoline UV protection. It leaves an enduring repellent finish that rejects soiling, sweat, body oils and atmospheric contaminants.

## RUBBER TILES 50x50cm

Rubber tiles are a wonderful choice on playground surfaces. You can use them at a trampoline entrance to provide children a clean and soft surface and protect them from falling on a hard ground. It is specially recommended, if you place a trampoline on concrete or ceramic tiles. This way you will also prevent the trampoline from moving.

Bottom part has specially designed structure to keep tiles in place no matter the ground surface.

**BUNGY TRAMPOLINE 4x1**

**TRAMPOLINE BATTERY**

Trampoline battery and bungee trampoline are made for public use. Good quality, easy installation and long life time are the main characteristics of the above products. Trampoline battery has a steel frame, treated with hot zinc, while bungee trampoline has an aluminium construction. Both are made for light and heavy jumpers and therefore suitable for mass use. All materials are protected from UV and other weather conditions and with high tearing resistance. 30cm long springs offer trampoline battery a very good rebound. It is safe and it is a lot of fun.

# Public use
